Foodservice - Our Concept

Quality and Wide Product Range

Our product mix of foodservice and catering products covers any need for both food production and serving within the professional kitchen, as well as the household and the modern fast food stand.

To ensure high quality and the right price, we choose only suppliers who guarantee the quality of their products - never compromising food safety.

Environmental Impact

Many share the opinion that disposable products have a greater impact compared to conventional tableware. However, it is important to consider energy consumption from production and disposal and compare it with the energy consumption for production and washing of multi-use articles over their entire product life time.

Our range also includes compostable sugarcane, maize starch and paper products, as well as products with the Nordic eco-label and the FSC™ label.

Two Product Series Gastro♦Line

The **Gastro♦Line** products include all of our serving products for the table. All products maintain a high quality level and can be used by professionals. Many of the products are packaged in consumer sizes ideal for cash and carries as well as supermarkets. The range contains hot cups, drinking glasses, cutlery, plates etc.

cater♦Line

Cater♦Line is our product series designed for professional kitchens and catering companies. Cling film, aluminium foil, aluminium trays, and baking paper comprise the range.

Our brands stand for extra quality and feature a number of products that are exclusive to Abena. All products have uniform packaging with clear application instructions.

Explanation of Symbols

The Nordic Swan

The Nordic Swan is a Nordic ecolabel recognised world wide for it's strict standards. This ecolabel guarantees that special consideration has been given to the environment, climate, quality and sustainability from raw material processing to production, use and disposal of the finished product. In order to get a license to label a product or service with the Nordic Ecolabel, the manufacturer must meet strict requirements concerning documentation, raw materials, preparation process, product composition and safety, the license number of each product can be found at AbenaOnline.

FSC™

The mark of responsible forestry
FSC® C111081

FSC™ is an international ecolabelling organisation which deals with forest products. FSC certified products are made of raw materials from protected, sustainable forests where only volume that can be reproduced by the forest is harvested and the traceability and integrity of the ecolabel are maintained through comprehensive control measures. At the same time, the FSC ecolabel guarantees that animals and plants are protected, that the people working in the forest do so with proper working conditions, training, safety equipment etc.

The wine glass and fork symbol

The wine glass and fork symbol is a labelling introduced by the EU which shows that the product in question is safe for food contact. When a manufacturer or a dealer chooses to label its products with the glass and fork symbol, the company automatically becomes the subject to rules relating to food safety, materials, traceability, labelling etc. It has to be possible to prove to the relevant authorities that all rules have been complied with.

DIN CERTCO

DIN CERTCO is a certification organisation based in Germany, which deals with i.a. compostable products of biodegradable materials. Products in Abena's product range which have been labelled with the certification standard DIN EN 13432 are biodegradable, with at least 90% of the organic materials transformed into CO2. The degradability of the materials may not have negative consequences for the environment as far as plant growth etc. is concerned.

Custom Print

The Custom Print label is used to identify which of our products are available with customized printing, based on the buyers request. Different Minimum Order Quantities (MOQ) apply. Contact Abena for MOQ on a specific product when not stated in the catalogue.

Material Guide

The material guide below is made as a general guideline for the use of our products.
The applicable/recommended temperature for each product may deviate from this guide. Please see www.abena.com or contact your local Abena Sales Representative for info about specific articles. All our articles, included in the Gastro-Line, Cater-Line or Abena Brand are clearly labelled with the application temperature, indicated with the thermometer pictogram.

	 Freezer	 Microwave	 Oven	 Thermometer		
	Polystyrene	Polypropylene	Aluminium	C-PET	A-PET/R-PET	PVC film 8/12my
					 	
Application						
Applicable temperature	 -30° - +100°	 -30° - +130°	 -30° - +350°	 -30° - +220°	 -30° - +70°	 -30° - +100°
Recommended temperature	 -10° - +90°	 -30° - +100°	 -30° - +350°	 -30° - +220°	 -30° - +70°	 -30° - +70°
Limitations	PS may break when deep frozen. The material may change form when heated to more than 90°C.		Non-coated aluminium should not be used for heavily acidic or salty foods. If any food is stored for more than 24 hours, the applicable temperature should be below 5°C.	Bör inte användas till sura eller salta livsmedel. Abena Foodservice

GLOBAL SOURCING

PRODUCT CONTROL

UNIQUE PRODUCTS

HIGH QUALITY

ONE-STOP-SHOP

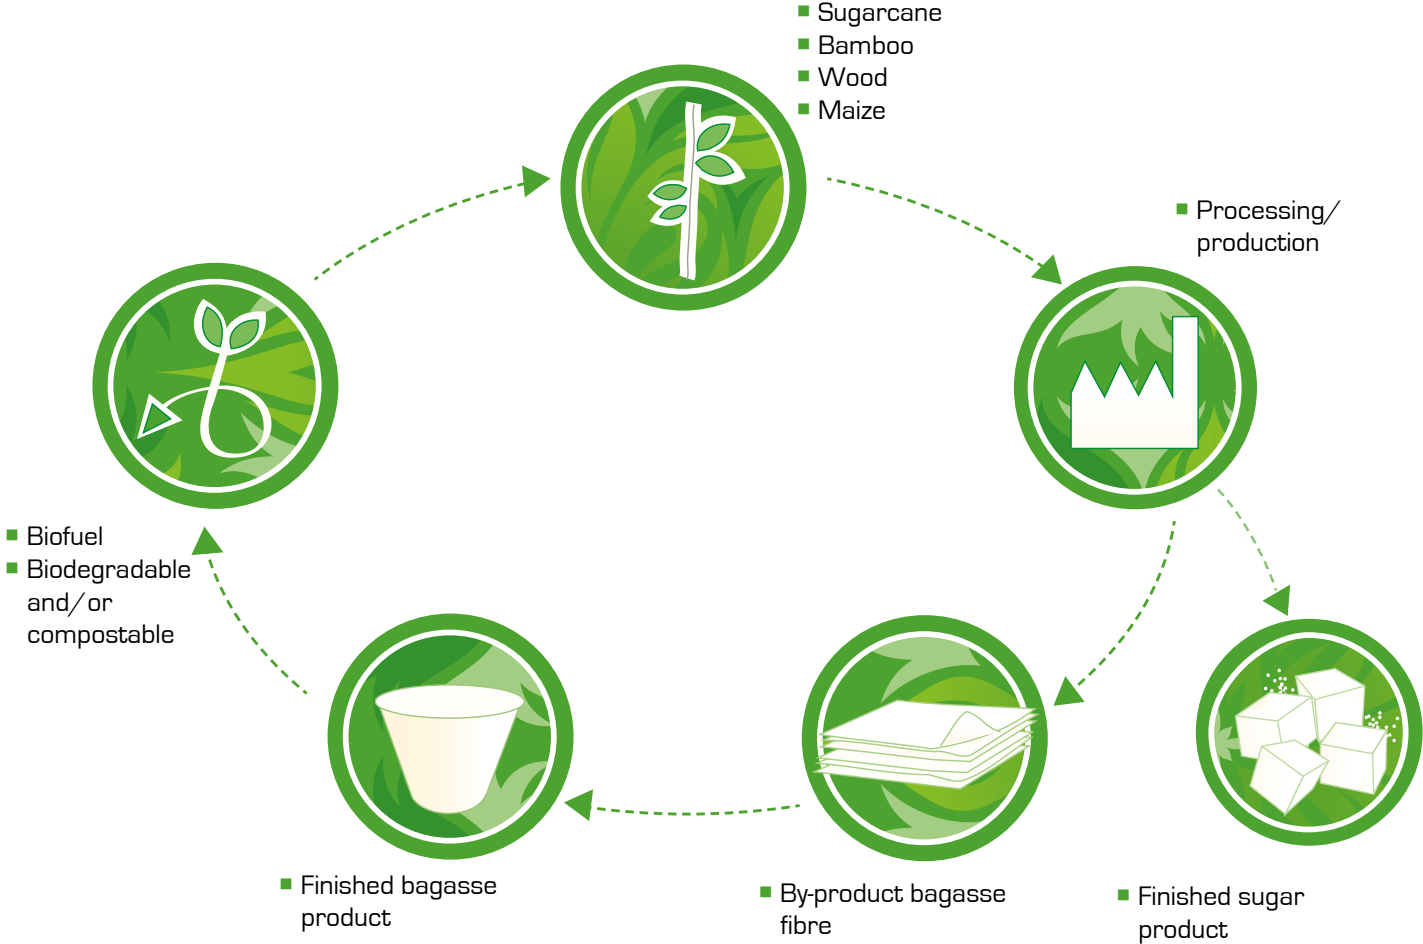

Abena's world of products

Abena has through many years of operation created a worldwide network of offices, facilities, partners and suppliers. This vast network of actors makes Abena able to source products suiting every need, and matching customers' demands. As we have our own offices around the world, we are always represented near the manufacturer. This proximity to our suppliers ensures that we are able to find products of high quality and make sure they are produced under the right conditions, of the right raw material. The proximity to our suppliers also ensures that we can make quality controls of every delivery before it is shipped to the customers. A part of our quality is also being near our customers, and being able to support, guide and educate them, in making the best choice for their unique situation.

Our network ensures that we have Abena employees and a warehouse near you. Abenas' worldwide presence also optimizes our potential in finding and creating unique products and solutions. We are continuously searching for new and innovative products, whether it is products already being produced or just rough ideas in need of realization.

Our network of Category Managers, sourcing and sales offices are in constant contact to streamline our product range and improve quality. All this is done in the effort to be your One-Stop-Shop in Foodservice and Catering Articles.

Eco-products

Bagasse: The perfect eco-friendly alternative
We strive to act as eco-friendly as possible, and you will find that our environmental range is growing each year. In this catalogue we have included our **new Sucadrops range** made from bagasse, which is a by-product derived from sugarcane production.

The extraction of the sugar from the sugarcane leaves a fibre material as a by-product called bagasse. This material can be used for the production of a wide range of articles, such as bowls, plates and cups. All these products have a lot of advantages compared to ordinary disposable tableware - of which the most obvious are eco-friendliness and sustainability. All bagasse-products are suitable for hot dishes and for heating in the microwave oven.

Cradle to cradle...
What happens to the bagasse-product after use? Under optimum circumstances it takes as little as 8 weeks from composting the product till it has converted to earth. Therefore, the product does not only take care of the environment during the processing but also after use - providing topsoil for the next generation of plants.

Bagasse

Trays

Hampi

Palm Leaves

You will be amazed when you learn more about the simple and sustainable production process behind the Hampi products. The naturally shed palm leaves are collected at palm plantations in India and heat pressed into their shapes and sizes without using any toxic chemicals or waxes. By challenging our habits and using more natural and recycled material, we will have an impact on our own environment.

- Natural, raw design.
- Attention-creating product with a good story.
- Eco-friendly products and production process.
- Good, functional quality.
- 100% free of chemicals and other additives.
- Compostable product.

Coffee Origin

Ripple-Wrap

Experience the Coffee Origins cup gallery, a collection of paper hot cup featuring vivid imagery inspired by the architecture, textiles and traditions of coffee-producing nations.

Influenced by the cultures of Guatemala, Cuba and Mexico, three new designs feature on Abena's range of paper hot cups, available in Ripple-Wrap. Each carton contains a random mix of cup designs, and the range of designs will be updated seasonally. Appealing to the ethical consumer, a cup from the Coffee Origins in not just a great-looking way to serve a hot drink. It will bring your costumers closer to the origins of their coffee.

Five per cent of Coffee Origins sales will go to our partner organisations.

Customize your Cup

Getting your brand into the hands of your customer is done efficiently by printing your logo on hot cups!

The first thing to do, is choosing the right type of cup for your needs.

We offer you a full range from our premium ripple-wrap or environmentally conscious PLA cups to heat insulating double-wall and economically conscious single-wall cups, offering you optimal conditions to print your logo on.

There are lots of possibilities of custom printing, why we have tried to give an overview of the process that should answer many of your initial queries.

Multi Glasses

Glass for many purposes

Printing area

Printing area

The minimalistic style of the Multi glass combined with the high product quality ensures that the content is presented elegantly and appetizingly.

We can assist you with customized solutions by profiling your logo on the glass. The smooth surface offers you optimal conditions to promote your company and efficiently places your brand into the hands of your customer.

We offer a series with straight wall and a large printing area, and also a series where the glass has a step that splits the printing area.

Custom print available – up to 6 colours. MOQ 50.000 pcs. per size.

CUSTOM PRINT

Multi Glasses

Glass for many purposes

Our multi-functional glasses can be used as ordinary drinking glasses for beer and water, but also be used for Take Away with yogurt, muesli and fresh berries, salads, vegetables, snacks etc.

All glasses are available in different sizes with matching lids, either flat or domed, and with or without a top hole.

Get inspired to build your own glass of contents.

Paper with PE-lamination

Abena's paper plate with PE-laminate has a higher paper thickness which gives extra strength to our plates. Furthermore the PE lamination makes the plates safe to use when serving greasy food.

Plastic

Plastic plates are generally stiffer than paper plates, and more resistant to sharp cutlery. As plastic plates are formed in a mold, each plate will be 100% identical. Due to different market demands our plastic plate range from economy to premium qualities.

Paper

Paper is the ecological and economical choice when deciding which disposable plate to choose. Paper plates are made from wood, being a natural raw material, and uncoated plates can be recycled with other paper products.

Foam

Foam plates are heat resistant. Apart from having a low weight the foam acts as a heat barrier, making them ideal when serving hot food. The insulating effect keeps the food warmer for a longer time and makes it easier to serve arranged food. Abena's foam plates are laminated to give at better resistance to greasy food.

Bagasse

Bagasse is a natural product and is the no. 1 choice when quality and ecology are combined. The bagasse plates has as a distinct texture and design, making it stand out from the other plates. Our customers like the stiffness from these plates. The plates are produced from a bi product from the sugar cane industry and after use, the plate is 100% compostable. You will find the bagasse products at page 17.

Retail Bags

Abena offers a range of stylish Detpak Retail Bags, ideal for all types of food, such as coffee beans, biscuits, chocolates, muesli and nuts. The bags includes a window, a great feature that ensure consumers' eyes are drawn to the contents of the bag.

They are made from premium quality natural brown paper, and lined with poly laminate for extra freshness. The retail bag has a tin-tie feature for easy resealing.

The bags are ideal for creating a premium, rustic look for your products.

Aluminium Trays

Guidelines for the use of aluminium trays in microwave ovens:

- 

Apply only aluminium trays with a maximum depth of 3 cm. Max. filling depth 2.5 cm. If deeper apply a water bath, e.g. for the heating of paté.
- 

Note: never use metal against metal. The aluminium tray may never touch the sides of the oven, the door or the bottom or any other metal item. This will avoid sparking and damaging of the microwave oven.
- 

Only heat filled trays. If the packaging is half empty the food can easily burn.
- 

Extend the recommended heating time by approx. 10 %, as the microwaves only work from above.
- 

Remove aluminium foil or lid as otherwise the dish will not be heated. If you need to cover the dish use a plate or microwave foil.
- 

Do not use bended, damaged or used trays in microwave ovens. Rinse the trays and hand over for recycling.

Type:

Vertical rim:

Aluminium trays with a vertical rim will often be a good solution for preparations of food in a large scale, but it also see application in smaller scale and in consumer kitchens. Combined with the flat carton lid, the vertical rimed aluminium trays are easy to stack and good for storage.

Rolled edge:

Aluminium trays with rolled edges are due to the thicker rim more ridged and a little more sturdy. They are very well suited for the larger trays.

Purpose:

Smooth wall:

Smooth walled aluminium trays are trays with smooth walls and smooth corners for a low friction surface. The smooth wall trays are ideal for baking as they don't stick and will not make indentations in the bread or cake.

Wrinkle wall:

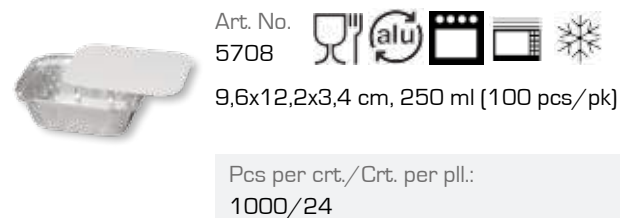

Wrinkle walled aluminium trays are multipurpose trays which due to the wrinkle are rigid even at lower thickneses. Therefore wrinkle walled aluminium trays are both rigid and light weight.

All our aluminium products are suitable to all types of food. Abena's aluminium products can be safely used from -40° C to +350° C. However they are not intended for strong acidic or salty food materials.

PE Cling Film

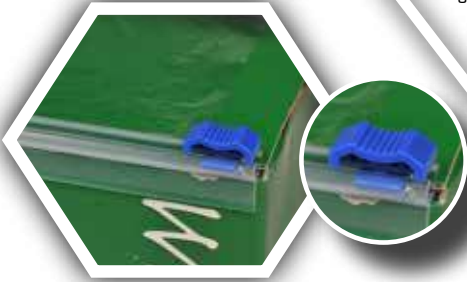

Cling film comes as perforated, non-perforated and in a cut box. The quality is defined by micron (8-12 micron). Each type of Cling film has its own purpose.

PE Cling film (9 micron):
A good all-round film. Ideal for storage and freezing of food, and also for pure fat, oils and food preserved in oil. The colour is very clear.

PE Gold Cling film (12 micron):
PE Gold Cling film has an improved adhesiveness compared to regular PE Cling film. It is available in 12 microns for better food protection, stretching and handling. Also for pure fat, oils and food preserved in oil. The colour is 'champagne'.

PVC Cling film (8 micron):
PVC Cling film has good adhesiveness and stretching propositions. Is often the preferred choice in professional kitchens. Not suitable for pure fat, oils and food preserved in oil like the PE Cling film

Special PVC film (12 micron):
Our Special PVC Cling film have the extra feature it can be used for hot applications in the kitchen. It is possible to use the cling film for covering a bowl during micro-wave heating if there is no direct food contact. The 8 micron cling film is approved until 150 degrees in 1 hours. The 12 micron is specially suitable for fresh meat, vegetables, cheese etc. as it is extra airtight.

Our Cling film also comes in cutboxes, where you just slide the blade from one side to the other. As alternative you can also see our dispensers.

Professional Meal Service

New tendencies and well-known quality

Food and catering systems have continuously developed. Among others due to changes in requirements and demands from users, new production units and techniques, changing tendencies within the food industry and different ways of supplying and serving meals. We follow the development closely and with Abena you will always have access to the latest news and all the well-known quality products in this product area.

Complete product assortment

We offer a complete assortment of food packaging with accessories and can be considered a total supplier of food and catering systems.
